

**Appendix 3.** Q-statements used along with the themes captured by each statement and their attitude towards technology (Positive (pos.) or negative (neg.)). Z-scores are the weighted average of the values for each statement and indicate the agreement between statements and factors. Distinction and consensus indicate whether the statements were distinct to a factor(s), had consensus, or were not assigned. Comparisons assess the significance of the differences between z-scores (\*\* indicates  $p = 0.01$ , \* indicates  $p = 0.05$ ).

State- ment #	Main theme	Role of tech- nology	Factor z-score				Distinction and consensus	Distinction comparisons
